DESCRIPTORS: \*Cyclohexanes, Vapor pressure,  
Temperature, Alkyl radicals.

Earlier statements and applications of the combined calculation method were used for the calculations of the temperature-dependence of the saturation pressure of n-alkylcyclohexanes. Coefficients were derived which were used to establish the temperature-dependence for various n-alkylcyclohexanes: for a number of these substances there is no previous data reported in the literature. Trans. of Khimicheskaya Promyshlennost' (USSR)  
1945, no. 6, p. 21-22.

DESCRIPTORS: \*Hydrocarbons, Heat, Evaporation,  
Vaporization, Temperature.

A method of calculation of the heat of evaporation of various substances is suggested which can also be used in a graphical form. It requires a knowledge of the heat of evaporation of a reference substance at a temperature as far from its critical temperature as that of the substance under investigation from its own critical temperature. In addition, the equation given involves knowledge of a constant. For paraffin hydrocarbons an equation is given for the value of this constant as a function (Physics--Thermodynamics, TT, v. 6, no. 8) (over)
